Contents

Materials

Typically in this section should mention a dataset used (or an examined Gymnasium environment).

Methods

Describe which methods were used. Eg. 8 neural networks architectures were prepared... Provide description of these architectures. You may also include short code example for clarification or simply include model.summary()

Results

Describe obtained results. Use:

```
tables
include (some) interesting plots, e.g. training/validation loss, confusion matrices, etc
```

Discussion

Provide short discussion (1-2 sentences). Comment the observed facts, which were earlier demonstrated in results part, e.g.

```
accuracy in range 0.8 to 0.9
CNN outperformed MLP (or not)
t-shirts were often confused with sandals
```
